 * START 2007
 *
 * This program serves as both a client and a server. Three modes of
 * operation are available:
 * - initiating mode
 * - bridging mode
 * - terminating mode
 *
 * The following are how to run thisprogram for each mode:
 * - Initiating mode: client_server null ANOTHER_HOST ANOTHER_PORT
 * - Bridging mode: client_server CURRENT_PORT ANOTHER_HOST ANOTHER_PORT
 * - Terminating mode: client_server CURRENT_PORT null null
 *
 * The program having the initiating mode MUST run last after all other
 * instances of this program with other operational modes has been started.
 *
 * In initiating mode, this program just simply sends a hello message to
 * another instance of this program that operates either as a bridge or
 * as a terminator that this program points to as specified in
```

# 12-clisvr (02)

```
* In terminating mode, this program just simply waits for an incoming hello
* message in CURRENT_PORT. Once it receives a hello message, it prints out
* the message in a certain format, and then quits.
```

```
*
* The following illustrates the idea above:
* 192.168.10.18 (alvin)
* $ ./client_server 8888 localhost 7777
* 192.168.10.18 (user)$
* $ ./client_server 7777 null null
* 192.168.12.17 (eus)$
* $ ./client_server null 192.168.10.18 8888
* The print out will be:
* 192.168.10.18 (alvin):
*   From eus to alvin: Hello
* 192.168.10.18 (user):
*   From eus to alvin to user: Hello
